Subject: Mother and child centre of excellence development between the VCC and the Queen Elizabeth Park

Dear Sir/Madam, please confirm that the storm water flow from the above site would not be drained into the catchment at the back of Normandy Place. It is the catchment which is channeled underneath Caldecot street and then through Sentosa development towards the Cascades stream eventually. Should it be the case, please confirm what measures will be taken to protect the current stream banks from damage by the increased stream flow

Regards

Theunissen Rabie
